

SKILLS

AI / AGENTIC DESIGN

- Claude / Anthropic SDK
- OpenAI Agent SDK
- RAG Architecture
- MCP Server Design
- Prompt Engineering

BUILD

- Next.js / React
- FastAPI / Python
- TypeScript
- Qdrant
- Cohere Embeddings
- ShadCN UI

SHIP

- Docker
- Vercel
- Netlify
- GitHub Actions
- Git

FOCUS

- Agentic AI Systems
- RAG Pipelines
- Full-Stack AI Products

AVAILABILITY

- Immediately
- Contract & Full-time

LANGUAGES

- English
- Urdu

PROFILE

AI Systems Engineer building software since 2022, with a focus on LLM infrastructure since 2023 after shipping a production RAG system that held up under real domain queries. Specializes in designing failure modes before they reach production — building the tooling and architectures that keep agentic systems predictable at scale. Works remotely with teams building LLM-powered products, primarily using the Anthropic and OpenAI APIs, FastAPI, and Next.js.

EXPERIENCE

- AI Systems Engineer** 2023 – Present
Remote · Multiple Clients
Built agentic AI systems and RAG pipelines for software companies developing LLM-powered products. Designed MCP server architectures and automation workflows for distributed AI teams. Primary stack: FastAPI, Next.js, Anthropic and OpenAI APIs.
- Full-Stack Developer** 2022 – 2023
Remote · Freelance
Developed full-stack web applications with Next.js and FastAPI. Transitioned focus to AI-powered features and LLM integrations mid-year after shipping a production RAG prototype that performed well under real domain queries.

FEATURED PROJECTS

- AI Interviewer — Mock Interview & Feedback Platform** 2026
AI-powered interview preparation platform that simulates realistic interviews, generates contextual questions, and delivers instant AI-driven feedback on communication, technical knowledge, and confidence — without a complex backend.
Stack: Next.js · Next.js API Routes · OpenAI API
- Smart Banking System** 2024
Production-grade banking platform enabling secure login, fund transfers, deposits, withdrawals, and multi-account balance management, using the Next.js App Router for server-side auth flows and real-time balance streaming.
Stack: Next.js · App Router
- Spec-Driven RAG System for Physical AI & Humanoid Robotics** 2025
Production-grade Retrieval-Augmented Generation system built entirely with the Claude Code CLI, pairing a Docusaurus educational book on Physical AI with an integrated retrieval agent. Used Qdrant for domain-specific chunking control.
Stack: Qdrant · Claude Code · Docusaurus
